

# Lake Erie Harmful Algal Bloom Forecast

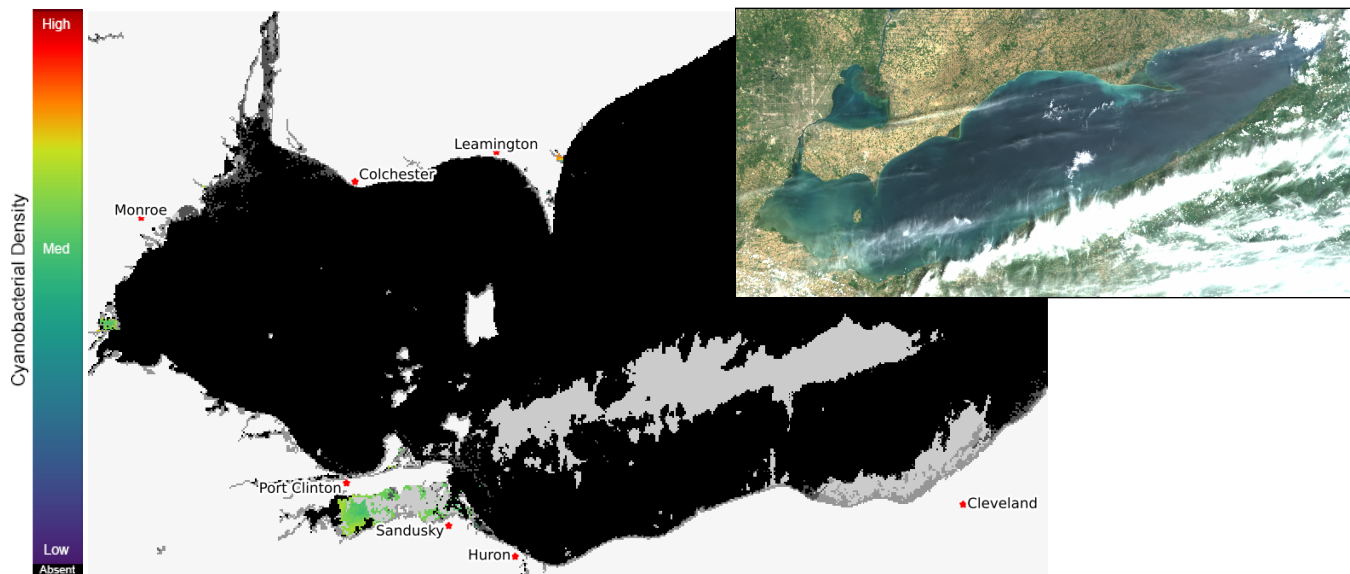

NATIONAL CENTERS FOR COASTAL OCEAN SCIENCE

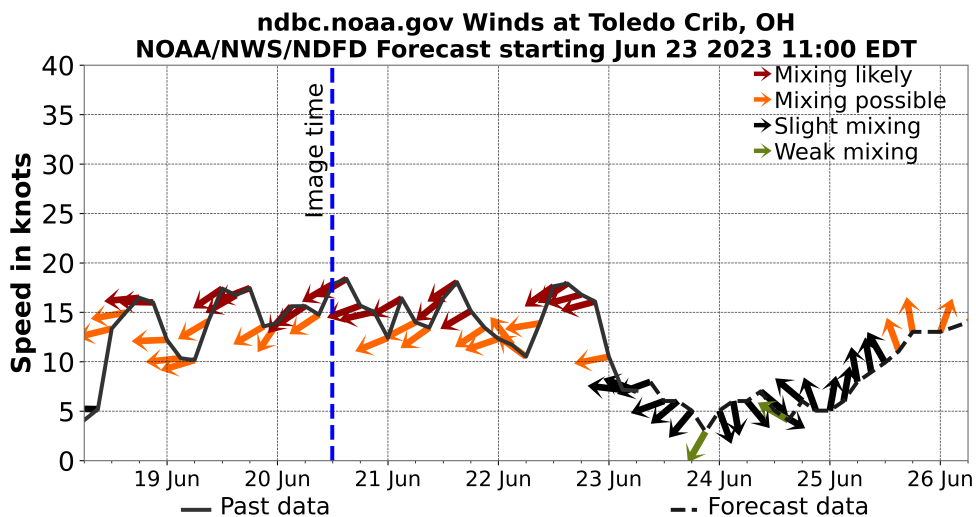

## Imagery Analysis & Forecast - 2023-06-23

Cyanobacteria is not currently detectable by satellite in western Lake Erie. The 2022 seasonal assessment can be found at [Lake Erie 2022 Bloom Assessment](#). The 2023 Lake Erie HAB Forecast is in the final testing stage, check back for further updates. For images of western Lake Erie, check [the western Lake Erie HAB Monitoring Page](#). No recent toxin data currently available. --Yizhen 06/22/2023

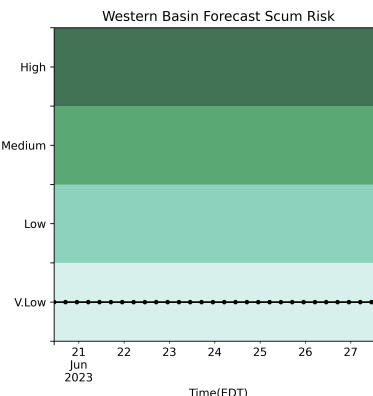

The past few days of imagery can be seen at [the HAB monitoring site](#). The Lake Erie Forecast is operated by the National Centers for Coastal Ocean Science. Contact [hab@noaa.gov](mailto:hab@noaa.gov) for technical Questions. Last Updated: 2023-06-23 08 AM EST

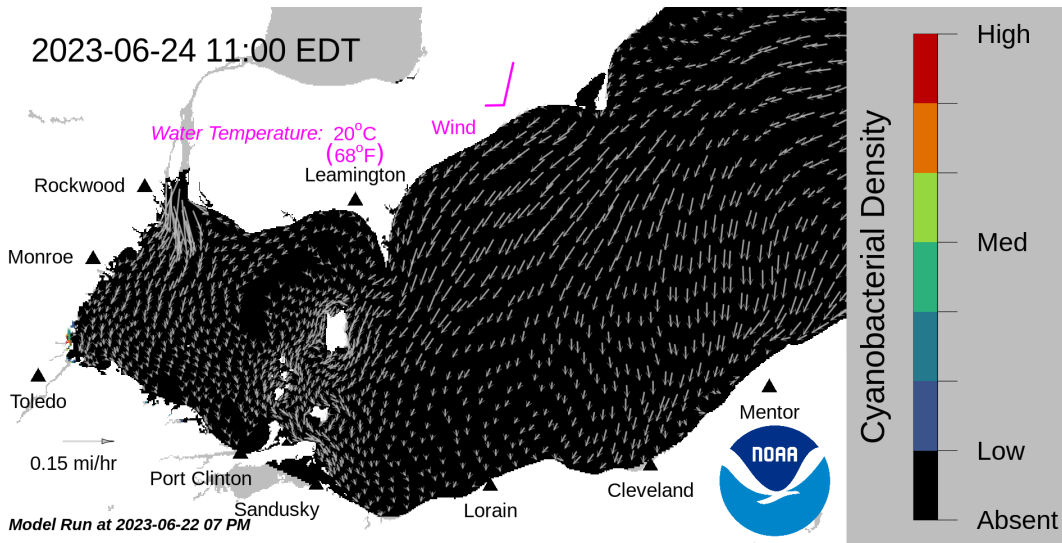

Current Lake Erie Sentinel-3 satellite imagery from the Ocean and Land Color Imager (OLCI) on Jun 20, 2023, showing bloom location and extent in the western basin. Grey indicates clouds or missing data. The estimated threshold of cyanobacteria detection is 20,000 cells/mL. Inset shows a truecolor image of the entire lake. Data derived from Copernicus Sentinel-3.

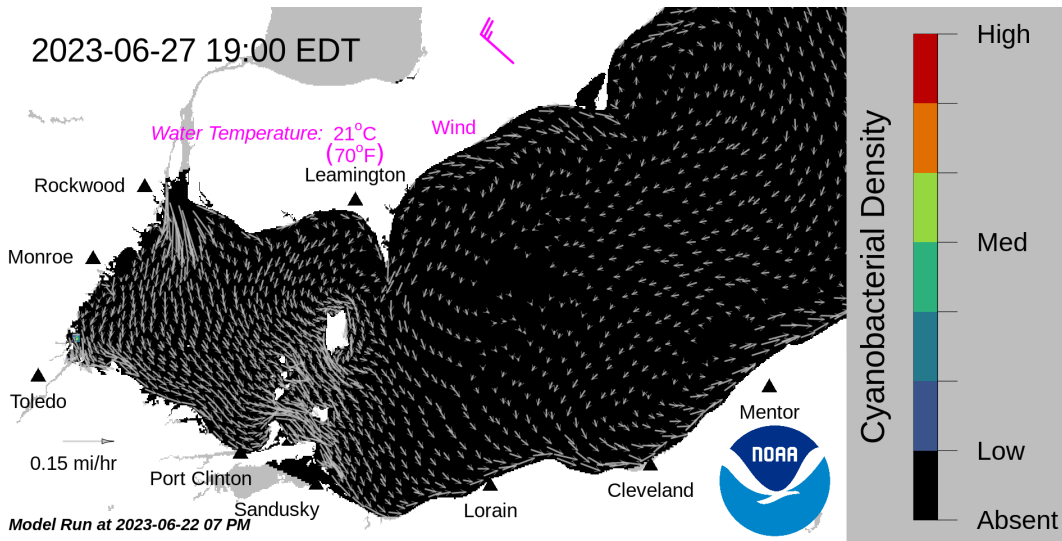

Wind speed and direction from ToledoCrib, OH. Blooms mix through water column at wind speeds > 15 knots.

Where the bloom is present in western Lake Erie, the potential risk of scum.

Forecast surface bloom position for Jun 24, modeled from the last satellite image with water currents estimated from the Lake Erie Operational Forecast System (LEOFS). Potential for bloom movement is forecast in 3-dimensions with a hydrodynamic model using satellite imagery and currents. The modeled output does not contain clouds. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.

Forecast surface bloom position for Jun 27. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.
